The complete guide to smartphone integration in the car

The ultimate resource to smartphone app integration in Europe and the USA. Infotainment services have become of paramount importance to vehicle manufacturers, in particular the integration of smartphones in the car. Several solutions are being developed and a few OEMs have already launched products in the market. SBD published a technical report on creating automotive app solutions in early 2010, which included smartphone integration, but due to high customer demand, they have now created this complete guide to smartphone apps, which provides a market overview of the various solutions with pricing models and a high level overview of the technical architecture.

Survey of consumer attitudes towards ADAS systems

Advanced Driver Assistance Systems (ADAS) are moving way from being expensive options in high-end luxury vehicles and into the mass market. This move to mass market is being supported by a combination of factors like the inclusion of ADAS in new car assessment programmes, insurance industry testing, government legislation and promotion and technological development leading to price reductions. This end user survey examines how customers respond to owning cars with ADAS, their future purchasing intentions and how they view the different factors that are encouraging the uptake of ADAS.

Publisher: SBD | **Product ref:** 114208

Price: \$3,960

EU & US ADAS Database

The Advanced Driver Assistance Systems (ADAS) database is one of a number of databases produced by SBD as a part of its annual subscription package. This database surveys the Advanced Driver Assistance Systems offered by vehicle manufacturers in Europe and USA as of November 2010. The database provides the user with an easy-to-manage list of ADAS systems offered by each manufacturer in Europe and USA on all of their models together with the cost, supplier, and system functionality.

Range Extenders for Electric Vehicles 2011-2021

About eight million hybrid cars will be made in 2021, each with a range extender, the additional power source that distinguishes them from pure electric cars. Add to that significant money spent on the same devices in buses, military vehicles, boats and so on and a major new market emerges. This unique report is about range extenders for all these purposes - their evolving technology and market size. Whereas today's range extenders usually consist of little more than off the shelf internal combustion engines, these are rapidly being replaced by second generation range extenders consisting of piston engines designed from scratch for fairly constant load in series hybrids. There are some wild cards like Wankel engines and rotary combustion engines or free piston engines both with integral electricity generation. However a more radical departure is the third generation micro turbines and fuel cells that work at constant load. The report compares all these. It forecasts the lower power needed over the years given assistance from fast charging and energy harvesting innovations ahead. Every aspect of the new range extenders is covered.
